List Installed Components of Admin connection

Databases

AP-PROC	Update	Procedure Database
AP-DATA	Update	Procedure Database

Each time a component is installed, the process creates a ROSHELL-SYSTEM item with a name of the
form <component><timestamp>, where <timestamp> is when the install was done. For most components,
installation involves a data/proc pair of databases and the ROSHELL-SYSTEM item is written to both
databases. The item whose name contains the latest <timestamp> will identify the most recently
installed version of the component. This report lists these ROSHELL-SYSTEM items and some others
that provide information about installed components.

AP-PROC
